

RELIABLE TRUSS SUPPORT / Top Flex Arch, 561ac, Opti Flex, 560ac-s

There is a lack of supporting products to attach efficiently and effectively to the cluster stem and support it throughout its growth.

Paskal arches are specially designed to prevent cluster stem damage. The truss arches support the growth of healthy tomato inflorescence and prevent the breakage of the tomato cluster at a later stage of growth.

Advantages

- Innovative design
- Quick and easy attachment at the flowering stage
- Adapted for different growing methods
- Lightweight
- Provides strong and long-lasting support
- Available in two sizes 5 mm / 6 mm
- Optional as rigid or flexible
- Available as biodegradable

Instruction of use

- Timing: only at the beginning of the flowering stage, when the flower cluster is blooming
- Hold the arch with the open side directed towards the stem
- Attach the arch onto the flower cluster stem, near the main stem
- Quantity: between 5-15 units per plant (depending on the country and the type of tomatoes)
